BASIC REQUIREMENTS

Public and contract environments make strict and wide-ranging demands on sanitary installations from compliance with detailed hygiene requirements and vandal-proof design through to a focus on cost effectiveness. Easy operation and maximum user safety are basic requirements met by all GROHE fittings for domestic as well as public and contract applications.

Reliable functionality.

When specifying GROHE for public and contract facilities there is no reason to compromise on stylish design and excellent functionality. The simple and easy operation of all GROHE special fittings is self-evident and, coupled with service-friendly design, makes GROHE the first choice for installers, maintenance engineers and users alike.

Convincing safety.

Planners, plumbers and property managers can rely on the high functional safety of GROHE products. Numerous quality and approval certificates reflect GROHE's commitment to quality and safety, for example our temperature limiters and thermostats prevent scalding.

Optimum hygiene.

Hygiene is a top priority in public spaces and many contract environments from medical facilities to food processing plants. GROHE's touch-free fittings meet the rigorous demands of these environments.

All GROHE fittings have smooth surfaces with no corners and crevices where dirt can accumulate making GROHE fittings easy to clean and particularly resistant to soiling - water drips off immediately and furring is prevented. In order to ensure perfectly hygienic water, and to prevent the formation of legionellae, biofilms and similar disease due to stagnating water, some GROHE models offer automatic flushing function at pre-set intervals as well as thermal disinfection.

Vandal-proof design.

Fittings in public buildings need special protection against vandalism. GROHE offers special solutions that help counteract vandalism and effectively prevent intentional flooding. Concealed installation, automatic shut-off valves, locks and special materials such as stainless steel are just some of the model-specific solutions that provide additional protection against vandalism.

Bright and well-illuminated public facilities can also make a key contribution to preventing vandalism by positively influencing the behaviour of users.

GROHE TOUCH-FREE FITTINGS

German hygiene regulations and requirements

Wash basin fittings must not be hand-operable in the following areas:

In motorway service centres.

Applicability:

- Service centres operated by Autobahn Tank & Rast GmbH & Co. KG

Wash basin fittings operated without hand contact are installed in the sanitary facilities of Tank & Rast service centres (Sanifair)

Regulations:

- Requirements of Autobahn Tank & Rast GmbH & Co. KG (Sanifair guarantee)

Wash basin fittings must not be hand-operable in the following areas:

In milk-processing companies.

Applicability:

- Companies for the production and marketing of raw milk, heat-treated milk and milk-based products, such as in: Dairies, collection centres, processing plants for dairy products. Milk processing rooms shall have an adequate number of facilities with hot and cold running water, or water pre-mixed to a suitable temperature, for cleaning and disinfecting hands. In work rooms and lavatories faucets must **not be hand-operable**.

Regulations:

- Council Directive 94/71/EEC of December 13th, 1994 amending Directive 92/46/EEC

Wash basin fittings must not be hand-operable in the following areas:

In meat-processing companies.

Applicability:

- Companies in which health problems affecting intra-community trade in meat products may arise (EEC Directive), such as in: abattoirs, meat cutting and processing companies, meat departments with fresh meat, butchers shops, meat-processing industry.

Companies shall afford an adequate number of facilities with hot and cold running water, or water pre-mixed to a suitable temperature, for cleaning and disinfecting hands. In work rooms and lavatories, faucets must **not be hand-operable**.

- All companies subject to the hygiene requirements governing trade in meat products. (meat hygiene regulations).

Cleaning facilities must be installed as close as possible to the workplace and in sufficient numbers, with faucets which must **not be hand-operable**.

Lavatories must be provided with facilities for washing hands, with faucets which must **not be hand-operable**.

Regulations:

- Council Directive 92/5/EEC of February 10th, 1992 amending and updating Directive 77/99/EEC and amending Directive 64/433/EEC
- Regulation governing meat hygiene dated June 29th, 2001 (as amended)

Wash basin fittings must not be hand-operable in the following areas:

In medical areas.

Applicability:

- In business operations and parts thereof in which people are to be examined, treated or nursed as inpatients, in which people are medically examined or treated as outpatients, in which body tissue, fluids and secretions of people or animals are analysed or in which work is carried out on pathogenic germs. Also wherever infectious or potentially infectious objects and substances are disinfected or where animals undergo veterinary examination or treatment, such as in: hospitals, medical laboratories, doctors' surgeries, therapeutic surgeries, dissecting rooms, specialist surgeries, emergency rescue and ambulance vehicles, operating theatres.

In working areas with increased risk of infection, faucets which can be operated without hand contact must be installed at the wash basins for use by the personnel.

Regulations:

- BVG C8 Health Service (formerly VBG 103 - accident prevention regulation -) dated October 1st, 1982 - updated version –

COST EFFECTIVENESS

Built-in cost effectiveness.

GROHE fittings offer exceptional value. With relatively low acquisition costs our range of special fittings offers a host of features to keep your water, energy and maintenance costs to a minimum. Even in the most demanding contract installations, our fittings ensure water only runs when required and at the necessary temperature. See for yourself how cost-effectively GROHE special fittings work.

GROHE ALLURE E

When high-class design is as important as water efficiency and touch-free operation, choose Allure E. With its elegant and sophisticated meeting of curves, cylinders and cubes, the range extends our successful Allure collection of faucets and fittings. A choice of mounting options and battery or mains operation ensures the design meets all of the installation requirements of your projects; while its cosmopolitan styling and refined details make it the perfect choice for luxury hotels, bars and restaurants.

Meet the installation requirements of your project

Allure E offers a choice of wall-mounted and deck-mounted basin faucets. Deck-mounted models are available with or without a mixing device and can be either battery or mains (230V) operated.

The convenient and ecological choice

For reduced power consumption, the latest energy-efficient electronics extend battery life to seven years, while a flow rate of only 5.8 l/min and automatic shut-off ensure economical use of water.

Easy to program

The remote control 36 206 000 allows you to easily programme individual settings, such as increasing or decreasing the detection area of the infrared beam.

GROHE ESSENCE E

Touch free, easy to clean, robust and ergonomic – the Essence E collection of infrared electronic faucets is designed for high-traffic areas where design and function are equally important. Airports, restaurants and offices are just a few of the places that will benefit from its cosmopolitan design. Balanced and poised, Essence E explores the purity of the cylindrical form and adheres to the same modern aesthetic as our successful Essence collection.

Designs for all types of installation

Wall-mounted and deck-mounted models ensure compatibility with all of your installation requirements. Deck-mounted models are available with and without a mixing device and can be either battery or mains (230 V) operated.

Latest energy and water saving features

A reduced flow rate of 5.8 l/min and automatic shut-off ensures Essence E combines style with economical features; while energy-efficient electronics extend battery life to seven years.

Easy programming of the faucet settings

The remote control 36 206 000 allows you to easily programme individual settings, such as increasing or decreasing the detection area of the infrared beam.

GROHE EUROPLUS E

Extremely safe - very attractive - highly economical: GROHE's touch-free fittings offer a decisive advantage:

The optional remote control (36 206 000) can activate an automatic flushing mode (in 1-day or 3-day intervals), effectively prevents stagnating water and the formation of legionellae when the fitting is not used for an extended period of time protecting the quality of the water. Europlus E also makes it easy to ensure perfect hygiene; touchless operation prevents the proliferation of bacteria and viruses while offering unsurpassed user comfort. The low operating costs, from the economical use of water and energy, and their attractive price/performance ratio make Europlus E a very cost-effective solution. The battery-powered models rely on standard 6 volt batteries with a life of more than 7 years assuming 150 operations per day.

GROHE EUROSMART COSMOPOLITAN E

Balancing touch-free operation with stylish design, Eurosmart Cosmopolitan E commands attention. From above, the keyhole shape of the spout gives the range its distinctive look, with the same silhouette repeating on the temperature control lever. The smooth transition from body to spout ensures maximum hygiene and easy cleaning. The design is enhanced with the latest infrared technology and complements our Eurosmart Cosmopolitan collection, which offers an extensive range of basin, shower and bath fittings.

GROHE EcoJoy™

GROHE StarLight®

LongLifeBattery

GROHE features:
SmartFix
TouchFree

Battery mounted in a waterproof casing under the wash basin.

Temperature control

Smart technology and intelligent features

The latest technologies allow the programming of different functions including automatic rinsing at fixed intervals to avoid stagnation. A cleaning mode disables the sensor for three minutes, allowing personnel to clean the basin without accidentally triggering the water flow. Variable reach settings ensure compatibility with all basin materials and, for convenience, the main settings can be changed manually or by remote control.

Water and energy saving technologies

The infrared sensor ensures water is dispensed only when needed, while a safety stop feature prevents continuous flow. With a maximum flow rate of 5.8 l/min Eurosmart Cosmopolitan E is a smart addition to our GROHE EcoJoy™ range.

Engineered for long-term use

The robust GROHE StarLight® chrome surface resists scratches to ensure long-term durability, while an optional rotation lock protects against vandalism. Long-life electronics extend the battery life to seven years. When the battery is low a blinking LED alerts staff.

Individual setting by remote control

The remote control 36 206 000 allows you to program individual settings such as changing the detection area of the sensor and activating thermal disinfection.

GROHE EUROECO COSMOPOLITAN E

Designed to meet the demands of heavily frequented public sanitary facilities, Euroeco Cosmopolitan E uses infrared technology to supply only the amount of cold or pre-mixed water actually needed. Plus, as the user never needs to touch the faucet, bacteria transfer is greatly reduced. Featuring pared down lines and embracing a distinctive lozenge shape for the spout and infrared sensor, the design offers perfect hygiene and first-class design at an attractive price. For convenience, the main settings can be changed by hand or remote control.

GROHE EcoJoy™

GROHE StarLight®

LongLifeBattery

GROHE features:
SmartFix

More hygiene and more features

To prevent water stagnation, Euroeco Cosmopolitan E can be programmed for automatic flushing at different intervals. Cleaning staff can also deactivate the infrared detection function for three minutes. The reach setting of the sensor can be adapted to suit the material of your basin. Main settings can be changed either on the faucet or by using the remote control.

Intelligent features for water and energy saving

The infrared sensor ensures water is dispensed only when needed. An integrated safety stop feature prevents water wastage, should an object be placed in front of the sensor.

Designed for the long-term use

The immaculate GROHE StarLight® chrome surface resists scratches to ensure long-term durability. Long-life electronics extend the battery life to seven years. When it's time to replace the battery, an LED on the faucet flashes – replacement is easy as the battery and the solenoid valve are mounted below the wash basin.

GROHE SELF-CLOSING FITTINGS

GROHE self-closing faucets and showers are renowned for their durability, water-efficiency and robust design. For the end-user the range offers intuitive operation and hygiene; once the user has washed their hands there is no need to touch the fitting again. And as the fittings close automatically, they prevent water wastage – significantly reducing annual running costs.

GROHE SELF-CLOSING FITTINGS

Robust fittings minimise water consumption, maximise hygiene.

Typical areas of application:

- Schools and sports halls
- Travel and transport sector, e.g. motorway service areas, airports, stations
- Commerce and industry

Typical demands:

- Economy
- Antivandalism
- Intuitive operation
- Durability

Rudolf-Harbig-Stadion, Dresden/Germany

GROHE EURODISC SE

Superior technology for advanced performance; thermal disinfection for maximum hygiene - Eurodisc SE self-closing faucets and thermostatic shower mixers offer safety and comfort for all users. Flow duration is adjusted electronically and can be set from 2 seconds to 3 minutes to meet the exact specifications of each installation. All faucets also include a start/stop feature, which enables the user to stop the water flow before the pre-set time. Changing the flow time and the setting the thermal disinfection feature are conveniently set by means of tip codes*. No tools are necessary and a re-adjustment of thermostat models is not required. Additional features, such as automatic shut off and a flow rate of only 5.8 l/min for basin faucets and maximum temperature limiters make it the ideal choice for a variety of projects.

*by pressing the top in a certain order - see instructions.

GROHE EcoJoy™

GROHE StarLight®

GROHE features:
ErgoTouch
LongLifeBattery
InvisibleFasteningSystem

The hygienic choice

In addition to single-touch activation for user hygiene, it is also possible to programme automatic flushing at three-day intervals, to prevent water stagnation and enable thermal disinfection of the pipes and fitting (by dispensing water with a temperature of at least 70° C for three minutes). This feature is particularly beneficial for healthcare environments.

Your users are safe in our hands

Eurodisc SE offers safety and comfort every time. In models which offer water temperature regulation, the maximum water temperature is limited by a hot water limit stop, which can be set anywhere between 35° C and 40° C. Shower fittings are additionally equipped with a thermostat.

Water efficient – save money and the environment

Faucets automatically shut off after the maximum flow time of 180 seconds, even if its top has been tampered with and blocked. It is also possible to stop the water before the pre-set time, which, combined with a flow rate of only 5.8 l/min, ensures not a drop is wasted.

Additional areas of application

Eurodisc SE can also be used in combination with pressure tanks as well as thermally and hydraulically controlled water heaters of sufficient capacity (it is not suitable for use in combination with unpressurised tanks).

GROHE CONTROMIX

Environmentally friendly and cost effective, Contromix self-closing fittings are ideally suited to washrooms and shower facilities in public environments. Ergonomically design and durable, the range facilitates easy and comfortable temperature selection for the user and comes complete with clever water saving feature that allows the user to stop the water flow before the pre-set time.

Smart double stop feature

When you press the top, the water starts to run for a pre-set time of between 5 and 40 seconds. If you finish washing your hands or showering before the pre-set time, simply press the top again to stop the flow – an attractive feature for environmentally-conscious users.

Encourages interaction

The ergonomic design of the top encourages intuitive operation, while the textured outer ring ensures safe temperature setting, even with soapy hands.

GROHE EUROSMART COSMOPOLITAN S

Water-efficient and intuitive to use, Eurosmart Cosmopolitan S brings architectural appeal to self-closing faucets and showers. With its keyhole-shaped spout and fluid transitions from body to spout, the feature-packed collection includes basin and shower mixers, making it a practical and stylish addition to public sanitary facilities and showers. For increased user-comfort, the factory-set flow duration of seven seconds for basin mixers can be increased during installation to 15 or 30 seconds – ensuring the range adapts to meet all of your requirements.

GROHE EcoJoy™

GROHE StarLight®

GROHE features:
SmartFix

Longevity ensured

High-quality GROHE StarLight® chrome and low-wear stainless steel components in the mixing device ensure longevity. An optional rotation lock for the faucet body and an optional rotation lock for the mousseur finish make the Eurosmart Cosmopolitan S virtually vandal-proof.

Reduce your running costs

Thanks to reduced water and energy consumption, Eurosmart Cosmopolitan S contributes to lowering your operating costs. This is due to the automatic stop function and the flow limiter which ensure that the water flow is never more than 5.8 l/min at 3 bar and that water is only dispensed when needed. The water temperature can easily be adjusted using the lever on the side.

GROHE EUROECO COSMOPOLITAN S

Uniting cosmopolitan design with the convenience of a self-closing fitting, Euroeco Cosmopolitan S delivers a wealth of features at a highly competitive price. Its smart silhouette utilises a keyhole-shaped spout and a smooth, conical body to bring a modern aesthetic to wash basins and showers in public sanitary facilities. Robust design, reliable GROHE technologies and an entry-level price point make Euroeco Cosmopolitan S a sensible long-term investment.

GROHE EcoJoy™

GROHE StarLight®

Less water – perfect flow

Being a self-closing faucet, the Euroeco Cosmopolitan S prevents water from flowing unintentionally or being wasted deliberately. The flow interval for the basin mixers come preset at seven seconds and can easily be changed to 15 or 30 seconds.

Durable and safe

Supplying only the amount of water that is actually needed, the tried-and-tested cartridge technology ensures low operating costs. The high-quality, scratch-resistant GROHE StarLight® chrome finish and the absence of edges and corners mean that Euroeco Cosmopolitan S is virtually immune to attack by vandals or dirt. An optional rotation lock helps protect the mousseur against manipulation.

GROHE THERMOSTATS

GROHE thermostats provide optimum comfort, high economy of operation and maximum safety: The water immediately reaches the desired temperature which is reliably maintained. No more fiddling with controls to get the temperature right! GROHE thermostats for basins and showers instantly compensate for variations in water temperature and pressure. In the most extreme case, i.e. should the supply of cold water fail, the hot water shuts off automatically to prevent scalding. Protection from scalding is particularly important where the water is temporarily heated to very high temperatures in order to ensure perfectly hygienic water - e.g. to prevent the formation of legionellae. GROHE thermostats combine optimum comfort with maximum safety and highly economical operation.

GROHE THERMOSTATS

The perfect combination of comfort and safety.

Typical areas of application:

- Public swimming pools
- Nursing homes
- Kindergartens
- Hotels
- Health sector

GROHTHERM XL

For sports facilities, gyms and saunas, in fact anywhere that group showers or basins are installed; Grohtherm XL is the safe solution. With a flow rate between 9 and 140 l/min, the central thermostat features GROHE TurboStat® technology to ensure the water temperature at each shower remains constant, irrespective of any variations in the water pressure or flow rate. Grohtherm XL is available for wall-mounted (1", 1¾") and concealed (1") installation.

GROHE TurboStat®

GROHE CoolTouch®

GROHE StarLight®

Easy settings for maximum safety

To match the differing requirements of each installation, the maximum water temperature can be pre-set to between 33° C and 43° C by means of the ergonomically shaped scale handle or concealed controls, which can only be re-set using a special key. GROHE TurboStat®, our leading thermostat technology, ensures a constant water temperature for the duration of each user's shower, by responding to any fluctuations in the water temperature or pressure within a fraction of a second. Additionally, should there be a failure in the incoming cold water supply; the thermostat will automatically shut down.

Perfect appearance

Smooth surfaces finished in GROHE StarLight® chrome, which resists dirt and tarnishing, make this fitting particularly easy to clean.

GROHTHERM 2000 SPECIAL

Constant temperature, water-saving, easy to grip – reliable protection from scalding and the possibility to save water by pre-setting the maximum flow rate make the Grohtherm 2000 Special thermostat the perfect solution for contract environments. Its standard winged handles allow the flow rate to be limited and the maximum water temperature to be set between 35° C and 43° C. And thanks to GROHE CoolTouch® technology, the entire outer surface of our Grohtherm 2000 models never exceeds the temperature of the water itself so there's no risk of scalding yourself on a hot chrome surface.

Safe water regulation and scalding protection according to DIN

The DIN EN 806-2 standard requires protection against scalding from hot water or the surfaces of fittings. GROHE thermostats such as the Grohtherm 2000 Special, include an adjustable temperature limiter as well as the **GROHE CoolTouch®** technology which prevents the outer surface from becoming too hot to touch.

Engineered for effective protection

All GROHE thermostats are based on the **GROHE TurboStat®** technology that mixes cold and hot water reliably and constantly as desired. Our thermostats react instantly to temperature and pressure changes and balance them automatically. In case of a sudden cold water disruption, e.g. due to a burst in a water pipe, this sophisticated technology stops the flow immediately to rule out the risk of scalding from unmixed hot water.

No chance for germs

Thermal disinfection of supply pipes and fittings is widely used as an effective measure against potential sources of infection in drinking water installations. Water heated to a temperature of 70° C is used to kill potential pathogens like legionellae and removing biofilms and other undesirable deposits from the pipes. **GROHE SafetyPlus** greatly facilitates thermal disinfection routines. The fitting can be set for thermal disinfection in next to no time. Subsequent readjustment of the thermostat is not required.

GROHTHERM MICRO

Grotherm Micro offers innovative technology for safety in the smallest space. With its excellent protection from scalding it suits the needs of plumbers and property managers alike. Easy to install or retrofit, this safe and efficient micro-thermostat can be combined with any single-hole mixer. Its small dimensions permit installation under a basin.

GROHE TurboStat®

GROHE StarLight®

GROHE features:
SafeStop
SafetyPlus

Thermostatic protection ensures maximum safety.

Single-lever mixers, self-closing valves or electronic fittings are used for basins in public and contract environments. However, variations in pressure or failure of the cold water supply may result in an undesirable and even hazardous temporary increase in the temperature of the mixed water. Grohtherm Micro solves this problem by limiting the maximum water temperature. Users are effectively protected against scalding by hot water which can often exceed 60° C. This permits easy compliance with hospital regulations and industrial safety standards as well as accident prevention rules.

Temperature limiter hidden underneath the wash basin.

Easy to install or retrofit, this safe and efficient micro-thermostat protects users from variations in temperature by limiting the hot water temperature.

Tamper-proof temperature adjustment.

Temperature adjustment protection is twofold, to prevent tampering: Firstly, the cover can be replaced by an optional metal cover (47 652 000). This alternative cover requires tools for removal. Secondly, the temperature adjustments can only be made with a hexagon socket wrench.

Precise temperature control for pillar valves without water temperature regulation.

When specified in combination with electronic or self-closing fittings without water temperature regulation, Grohtherm Micro enables precise temperature control of pre-mixed water and therefore reliable protection from scalding.

Temperature control by socket wrench

GROHTHERM ERGOMIX

Grotherm Ergomix is unbeatable in medical specification:

- Extremely easy to operate and adjust.
- Thermal disinfection is very simple: After overriding the safety stop (which can be set between 35° C and 45° C) using a simple tool, it can be thermally disinfected - without having to re-adjust the thermostat after disinfection.
- Safety is ensured: A metal stop on the body controls the flow rate and an adjustable safety stop limits the maximum temperature to prevent scalding.
- Easy to clean: Water drops off immediately from its smooth surfaces.
- S connections are concealed and - optionally - fitted with shut-off valves.

Space-saving thermostat operated from the front

Thermal disinfection

Easy to operate and very safe.

GROHE has adapted Ergomix to meet the demands of a washstand in the medical sector. A compact design was required, so that dispensers for soap and disinfectant can also be positioned over the washstand to the right and left of the fitting. Instead of locating the thermostat at the side as usual, it is now conveniently and compactly operated from the front of the Ergomix. This feature is appreciated by doctors and nursing staff.

Ergonomic and comfortable.

Decisions are very often influenced by such small things. The ergonomic long arm lever, 100° swivel range and front-operated thermostat make faucet usage simpler and more convenient.

GROHE SINGLE-LEVER MIXERS

Doctors, nurses or people who find conventional fittings difficult to operate certainly appreciate easier operation. Longer levers, which are easy to reach from the front, facilitate the opening and closing of basin, shower and bathtub fittings. Additional qualities such as hygiene and robust design provide extra benefits.

GROHE SINGLE-LEVER MIXERS

for the health and disability sector:
Ergonomically-shaped levers facilitate
operation.

Typical areas of application:

- Hospitals, surgeries
- Nursing homes
- Laboratories
- Public disabled facilities
- Home care environments

Typical demands:

- Hygiene
- Ergonomics
- Durability
- Safety

GROHE EUROECO SPECIAL SAFETY MIXERS

Washing your hands with your hands free – this is the idea behind the wall-mounted Euroeco Special safety mixers, designed with the needs of doctors and nurses in mind. Wall-mounted installation keeps the basin free, and in order to reduce the risk of accidents caused by projecting parts, faucet levers and spouts are available in a choice of lengths.

GROHE SilkMove®

GROHE StarLight®

GROHE features:
ErgoTouch
InvisibleFasteningSystem

Comfort and safety for all users

Because the flow rate can be variably pre-set, the robust metal lever only has to be pushed from left to right (left: cold, right: warm; maximum temperature can be pre-set). This helps control both water consumption and energy costs. To spare users from "hot" surprises, the water is always cold when the faucet is first opened.

Exceptional hygiene

A laminar flow prevents bacteria in the air entering the water and the smooth, easy-to-clean surface of the fitting combine to ensure perfectly hygienic water.

Built to last a lifetime

All parts are extremely durable and hardwearing; the swivel spout is, for example, mounted on a particularly stable bearing. Optional S connections with shut-off valve facilitate maintenance.

GROHE EUROECO SPECIAL

Featuring an ergonomically-shaped lever Euroeco Special ensures effortless operation for a wide variety of user groups. The combination of a gently curved lever and GROHE SilkMove® technology make it easier to open the faucet as less force is required for the lateral movement when adjusting the water temperature. The design is ideal for basins, bathtubs and showers in private and public sanitary facilities, for disabled users or where the end-user has reduced dexterity. Euroeco Special is available with either a full lever or open lever, with spouts and levers coming in a choice of lengths to meet individual requirements.

GROHE SilkMove®

GROHE StarLight®

GROHE features:
SwivelStop
Covered S-unions
CoveredScrews

Integrated temperature limiter

Hygiene - no corners and edges, flowing forms

Thermostatic scalding protection

Easy operation for hygienic environments

In kindergartens and nursing homes the easy-to-use features facilitate independence. The design is also ideal for public facilities where planners want to cater for user groups with wide ranging needs. For surgeries and laboratories the laminar flow controls plays a key role, as there's no chance of water contamination by bacteria from the air. The length of the operating lever is adapted to the spout length of each individual variant.

Additional scald protection

For safety, the installation of the micro-thermostat Grohtherm Micro on the service valve under the basin provides protection from scalding.

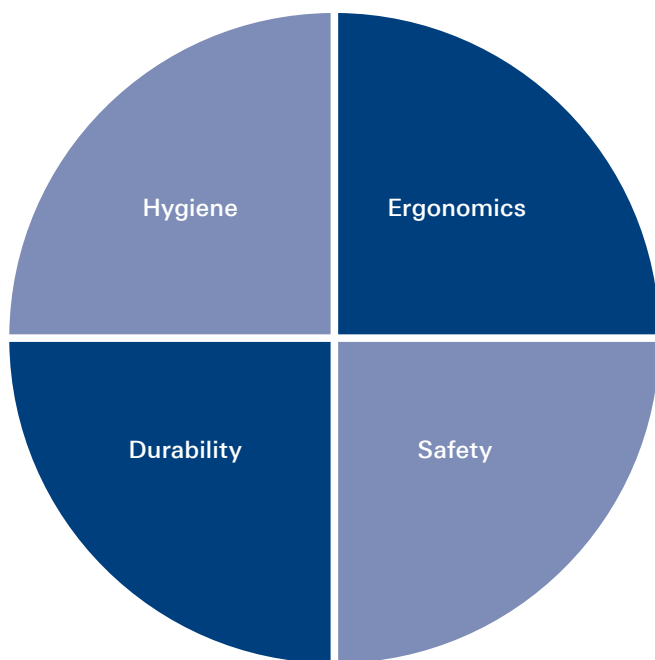

Ergonomics

GROHE EUROECO SPECIAL

New design for the professional solution

GROHE presents a new generation of Euroeco Special faucets integrating the latest project know-how to meet our clients' demands.

Hygiene, ergonomics, durability and safety are reflected in a modern yet timeless design.

The optimum solution for all applications

From hospitals to care homes; from patients' bathrooms to examination rooms; and from laboratories to kitchens, the new Euroeco Special offers maximum flexibility for all draw-off points.

GROHE StarLight®

Radiant chrome finish resistant to soil and tarnishing - stays like new for years.

Rounded shapes:

- Degressive shapes to avoid accidents
- Smooth curves for easy cleaning
- Lever length matches spout length for convenient operation

Overlapping cap:

- Water drips off for easy cleaning

Smooth waste rod:

- Clear shapes for easy cleaning
- Smooth edges to protect the user

Integrated temperature limiter:

- Maximum temperature can be pre-set to reduce energy costs and for extra safety

ErgoTouch:

- Easiest operation with only a tip of the finger
- Reduced contact areas of the lever
- Strong metal lever

GROHE SilkMove®
Smoothest handling and a lifetime of maintenance-free comfort and reliability

Laminar mousseur:

- No bacteria caught from the air

ENJOY THE INSPIRATION

Like attracts like. Therefore, it's hardly surprising that GROHE products can be found in some of the finest buildings in the world. From luxury hotel suites and spas to the smartest residential addresses, our faucets, showers and fittings are selected by architects and designers looking to treat the end user to a five-star experience.

Our products are reliable, durable and are engineered to perform under the most demanding circumstances. Original designs that make a statement, are intuitive to use and offer exceptional safety, comfort and enjoyment. Which is why those in the know select GROHE, every time.
